***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-54, drawn to a peptide-nucleotide conjugate composition, classified in class 530, subclass 322.
  - II. Claims 55-58, drawn to a method of inhibiting cellular proliferation using a peptide-nucleotide conjugate, classified in class 514, subclass 8+.
  - II. Claims 59-62, drawn to a method of inhibiting a virus using a peptide-nucleotide conjugate, classified in class 514, subclass 8+.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, II and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case applicant has set forth two distinct modes of use (Groups II and III), inhibition of cellular proliferation or inhibition of a virus with the same peptide-nucleotide conjugate; wherein the search required for cellular proliferation is distinct from that required for a virus. Only one of Groups II and III will be examined along with the peptide-nucleotide composition of Group I.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
